

Resolve Your Media Display Headaches Once and For All

**Pro-Player Plus™ Media Control Systems
are a Proven Game Changer
for Exhibit Media Display**

○ Tradeshows ○ Corporate Installations ○ Museums

No budget for an A/V technician?

**CHANGE THE WAY
YOU A/V**

Pro-Player Plus™ is simple to operate
... without breaking a sweat ... or the bank.

Tired of paying exorbitant rates for 24 hour round-the-clock power?

**CHANGE THE WAY
YOU A/V**

When power is restored, Pro-Player Plus™
restores your media to your monitors wherever it left off
... without you lifting a finger.

No room in your exhibit to hide a massive video playback system?

**CHANGE THE WAY
YOU A/V**

Pro-Player Plus™ requires ZERO booth footprint.
These tiny powerhouse players mount right to the rear of your monitors
... now wasn't that easy?

A Powerful New Breed of Media Player

You've Never Before Had THIS Kind of Control At Your Fingertips

○ USB Auto-Load

The easiest way to load media that we've ever seen. Absolutely anyone who can insert a USB thumb drive can load and play their media, no a/v technician needed.

○ Built-in Web Browser

Access the true power of Pro-Player Plus via any smart device with a Wi-Fi connection. Through it you can control everything: load media, create playlists, add lighting effects, play your media ... right from your smart phone, tablet or computer.

○ Playlists

It's simple to create playlists (on your Wi-Fi enabled smart phone, device or laptop). When a new customer walks up, tailor your sales pitch with a different video. Simply select it to play it immediately.

○ Multi-Link Sync

Connect as many Pro-Player Plus units and monitors together as you'd like, and play them in sync. No more logo loops or graphics changing at slightly different times.

○ Live Camera * Web * Laptop View

On any or all monitors, display a live camera feed, or a website (without a laptop), or the content of your computer screen.

○ Zero Footprint

No need to allocate valuable exhibit space, these tiny powerhouses can be mounted right to the back of your monitors, taking up virtually no space at all.

○ Power Recovery

Never fear a power failure again. Pro-Player Plus will restore your entire system, no matter how many players are attached, to exactly where it was prior to a power interruption ... automatically.

○ PowerPoint Compatible

Teaming Pro-Player Plus with PowerPoint on a LAN, you can give truly dynamic presentations complete with multiple video displays, lighting cues and surround sound. Directly from within PowerPoint, users can trigger any feature that Pro-Player Plus has to offer.

○ 4K or UHD

Display your videos with the latest high resolution. You can even go ahead and link as many of these units together as you'd like and design crazy-sharp beautiful video walls.

○ DMX Lighting Control

Now you can easily add DMX output to any project by just attaching the DMX USB dongle to Pro-Player Plus. Every system comes with a library of DMX files which allow you to quickly add colored lighting to your displays ... did we mention *in sync with your videos* too?

○ External Triggers

Great for interactive displays. This feature allows you to use any type of switch (photocells, IR, proximity sensors, pressure sensors, etc) to trigger a scene. Someone walking thru a doorway can trigger a video to start, then halfway down the hall trigger something else, and their exit can trigger the system to reset. Imagine the possibilities for corporate installations, sales demos, museum and trade show exhibits.

○ VPN-Play

Addresses bandwidth issues associated with Web Meetings by eliminating the need for streaming. Rather than streaming chunky shuttered video, Pro-Player Plus stores your content on each remote player and manages synchronized or independent playback in each location from one main site.
